

PROOF OF FORMULA 4.227.11

$$\int_0^{\pi/4} \ln(1 - \tan x) dx = \frac{\pi}{8} \ln 2 - G$$

Write the integral as

$$\int_0^{\pi/4} \ln(1 - \tan x) dx = \int_0^{\pi/4} \ln(\cos x - \sin x) dx - \int_0^{\pi/4} \ln \cos x dx.$$

The result follows from the evaluations

$$\int_0^{\pi/4} \ln(\cos x - \sin x) dx = -\frac{\pi}{8} \ln 2 - \frac{G}{2}$$

and

$$\int_0^{\pi/4} \ln \cos x dx = -\frac{\pi}{4} \ln 2 + \frac{G}{2}$$

given as entries **4.225.1** and **4.224.5**, respectively.
